- B Draft Storm Water Utility Ordinance

1. EXECUTIVE SUMMARY

The Village of Somers operates and maintains its stormwater management system, which includes various drainage infrastructure such as grassed swales and ditches, channels, storm sewers, inlets, and manholes. The Village also maintains the streams and other watercourses that run within its limits.

Currently the cost of operation, expansion, and maintenance of the Village's drainage infrastructure and watercourses are paid by property taxes through the General Fund. A reduction in State shared revenue and the ever-increasing responsibility for stormwater quality as well as quantity, have strained the General Funds resources related to stormwater management. Also, collection of storm water management funds through the property tax levy may not be the most equitable method of collection, because it does not include all properties that contribute stormwater runoff and is not directly related to the amount of runoff generated from a property.

State Statute 66.0821 allows municipalities to create a Stormwater Utility to aid in funding of operations and maintenance of the municipal separate storm sewer system. As a Utility, each user is charged a reasonable fee based on their impact on storm sewer services. The purposes of this report are to evaluate the feasibility of creating a Stormwater Utility in Somers and to establish a preliminary budget and user fee rate for the Utility.

A proposed storm water utility budget amount was developed based on implementing the proposed Stormwater Utility Capital Improvements Plan. The annual budget amount of \$250,000 includes funding for projects for the existing stormwater system improvements and maintenance activities.

Impervious area on a parcel is the amount of area on that particular parcel that does not allow water to absorb easily into the soil. There is a strong correlation between the impervious area on a property and the amount of stormwater leaving that property. A sampling of single-family properties was reviewed to develop a typical impervious area for single-family properties. The typical impervious area of 5,000 square feet was taken as one (1) Equivalent Run-off Unit (ERU). All other parcels were calculated to determine the impervious area on each individual parcel. The other parcels were divided by 5,000 to establish a number of ERU's associated with each parcel.

Dividing the stormwater utility annual budget by the total number of ERU's in the Village, the unit cost per ERU per year was calculated to be \$43.32/year/ERU, or \$10.83/ERU if billed quarterly. Each single-family property would be billed the equivalent of the ERU unit cost. Other parcels would be the ERU unit cost multiplied by the number of ERUs associated with the individual parcel.

A new stormwater utility ordinance provides language on the creation of the stormwater utility and policies. The ordinance includes a credit policy for two-family, multi-family, and non-residential property owners to potentially reduce their stormwater utility bill.

2. FUNDING FOR STORMWATER PROJECTS

2.1 General Property Tax

Stormwater management and related operations have typically been funded through the general tax levy. The general tax levy is based on assessed property value and, therefore, the cost of stormwater service is distributed amongst the tax base. The tax base does not include tax-exempt properties such as schools, churches, and public property, which also contribute stormwater runoff to the system. In addition, the amount of stormwater runoff produced from residential property is typically less than the runoff produced from other land use classifications. This is due to the fact that residential property typically has a higher percentage of grassed area, which allows more stormwater to soak into the ground, producing less runoff. Therefore, the collection of storm water management funds through general property tax levy may not be the most equitable method of collection because it does not include all properties that contribute stormwater runoff (or that benefit from the Village's stormwater management systems) and is not directly related to the amount of runoff generated from a property.

2.2 Assessments

New infrastructure required because of new development is normally funded by the developer of the land through developer construction of the improvement, impact fees, or development agreements. Special Assessments can also be applied to reconstruction projects, but assessment is typically a less desirable method of funding. The assessment area can be based on the entire drainage basin being served or on the front foot of property being served by a particular stormwater collection system.

2.3 Grants and Loans

Financial Assistance is available for local stormwater and pollution control efforts through various DNR Loan and Grant Programs. Unfortunately, the budget for funding of these grants and loans is capped and is limited. Urban Nonpoint Source & Stormwater Grant Program (UNPS & SW) funds are used for control of polluted runoff in urban project areas and stormwater management. These funds are awarded to both planning and construction projects. Planning Grants are cost shared up to a maximum of 70% and the construction costs are cost shared up to 50% and up to a maximum of \$150,000.

UNPS & SW grant funds are limited in that they may not be used to fund dredging projects, projects related to new developments, or projects that do not have a water quality benefit. Projects that are not water quality based include projects designed only to relieve flooding or drainage issues.

Grants and loans can continue to offset the cost of a stormwater system program regardless of the funding mechanism used to collect the funds to operate the system. However, in and of themselves,

grants and loans are not a predictable or reliable source of funding. Grants related to stormwater programs are historically very competitive and have a relatively low per project funding amount.

2.4 Stormwater Utilities

Stormwater utilities collect the funding necessary for storm water management activities based on the amount of stormwater produced on a particular property, typically through the amount of impervious area within the property. Therefore, the smaller the contributor to the amount of stormwater collected, the smaller the proportionate fee collected for service.

Stormwater utilities, like other public utilities, include property owners that are normally tax exempt and therefore do not contribute funds for stormwater management. Therefore, the stormwater utility collects from all properties that contribute significant runoff to or benefit from the Village-managed stormwater collection system.

Stormwater utilities are authorized under Chapters 61 and 66 of the Wisconsin Statutes. Section 66.0821 allows municipalities to create a system for collecting, transporting, pumping, treating, or disposing of stormwater. Some examples of eligible costs are:

- Planning and design
- Construction and Maintenance of Storm Sewers
- Construction and Maintenance of Curb and Gutter
- Ditching
- Stream Bank Stabilization
- Construction and Maintenance of Detention/Retention Basins
- Street Sweeping
- Leaf Collection
- NR 216 Programs
- Reimbursement of Past Expenditures (Debt Retirement)

3. STORMWATER UTILITY BUDGET

3.1 General

A proposed storm water utility budget amount was developed based on implementing the proposed Stormwater Utility Capital Improvements Plan. The budget amount includes funding for projects for the existing stormwater system (drainage infrastructure and watercourses) improvements and maintenance activities.

3.2 Stormwater Utility Services

The proposed stormwater utility budget amount includes planning, staff, storm sewer system maintenance, best management practices maintenance, capital improvement projects, equipment replacement fund, management, and other expenditures.

Storm sewer and best management practice maintenance activities include, but are not limited to, street sweeping, catch basin cleaning, detention basin management activities, leaf and brush collection, and televising of the existing storm sewer system to detect system failure.

3.3 Stormwater Utility Needs and Proposed Budget

The preliminary annual stormwater utility budget amount was estimated to be \$250,000/year in order to implement the Stormwater Utility Capital Improvements Plan as proposed. This budget amount total will be used to determine individual account charges. An evaluation of property impacts is discussed later in Section 6 of this report.

Needs identified in the Capital Improvements Plan beyond the \$250,000/year budget are expected to be addressed by other Village accounts.

4. IMPERVIOUS AREA ANALYSIS

4.1 General

The impervious area on a parcel is the amount of area on that particular parcel that does not allow water to absorb easily into the soil. There is a strong correlation between the impervious ground cover on a property and the amount of stormwater runoff leaving that property. These impervious areas include hard surfaces such as rooftops, driveways, sidewalks, patios, as well as compacted areas of soil such as gravel driveways and parking areas. In addition, impervious areas accumulate pollutants that are readily carried offsite by stormwater runoff. The more impervious surface that is present in an area, the more pollutants the Village must manage in the stormwater system.

Therefore, the impervious area analysis is an appropriate basis for developing utility user fees. The measurement and calculation of impervious area on a parcel will determine the proportionate share of the annual stormwater utility budget that will be charged to each individual property or utility customer.

4.2 Data Sources and Impervious Area Measurement Method

The Kenosha County GIS database was utilized to evaluate parcel impervious areas. The GIS database included parcel areas and aerial photography from 2015. Using GIS software, the impervious area was isolated and calculated for parcels throughout the Village.

Village staff provided information regarding building permits since the date of the aerial photographs. Information about the proposed building and driveway footprints was used to determine the impervious area on lots that were improved since the date of the aerial photographs.

4.3 Single-family Parcels

The Village currently has 1831 developed single-family residential parcels within the study area. A representative, random sample of 40 single-family residential properties were measured for impervious area. An average (mean) impervious area was determined for the 40 single-family parcel to be 5309 square feet (SF). The median value for the 40 single-family parcels was 4,663 SF. Table 1 at the end of this section shows the sample of the 40 parcels.

4.4 Two-family, Multi-family and Non-residential Parcels

All two-family, multi-family parcels, and all non-residential parcels were calculated to determine the impervious area on each individual parcel. This calculation also included Village owned parcels, but excludes parkland, conservancy areas, and street right-of-way. Figure 1 illustrates the method used to calculate impervious areas on these parcels. In a majority of the cases, the Kenosha County 2015 aerial photographs and GIS mapping files were used to calculate the impervious areas. For site improvements constructed after 2015, site development plans were used to establish site impervious areas.

FIGURE 1
Impervious Areas

4.5 Parcel and Area Distribution

The distribution of parcels within the Village is shown in Figure 2. This figure takes into account only individual ownership, not total area, as this study only looks at a sampling of areas for single-family residential parcels.

FIGURE 2
Parcel and Area Distribution

Figure 3 is a chart based on the Average Impervious Area of the four categories shown. For single-family residential, the statistical average of 5,309 SF of impervious area from the 40-parcel sample is shown. The figures for the other categories are average impervious area based on measurements of all parcels in that category.

FIGURE 3
Average Impervious Area

			MEDIAN VALUE	4,663

5. USER FEE RATE STRUCTURE DETERMINATION

5.1 General

The user fee rate structure determines the distribution of the proportionate share of the annual stormwater utility budget that will be charged to each individual property or utility customer.

5.2 Equivalent Run-off Unit (ERU)

The residential average (mean) impervious area was determined in the Section 4.3 to be 5309 square feet (SF). The statistical median value of the sample is 4663 SF. We recommend that the ERU be established as follows:

$$1 \text{ ERU} = 5,000 \text{ square feet of Impervious Area}$$

5.3 Single-family Parcels

All the Village's 1831 single-family residences within the study area shall be charged one (1) ERU. Single-family residential lots that are not currently improved, including large tracts that are zoned residential with no improvements, are considered undeveloped and are not charged an ERU.

5.4 Two-family, Multi-family, and Non-residential Parcels

All two-family, multi-family, and non-residential parcels were analyzed to determine the impervious area on each parcel. The impervious area on each individual parcel is divided by the ERU of 5,000 square feet of impervious area. The resulting quotient is the number of ERU's to be charged for an individual parcel.

5.5 Total ERU's Available

A total ERU's for all parcels is calculated to be 5769.8 ERU's. Table 2 summarizes the number of ERU's for each parcel classification.

5.6 ERU User Fee Rate

Using the total number of ERU's available and the stormwater utility annual budget of \$250,000/year, the unit cost per ERU per year is calculated to be \$43.32/year/ERU, or \$10.83/ERU if billed quarterly.

TABLE 2
Total ERU's by Unit of Classification

Parcel Type	Units of Parcels (each)	Total Area of Impervious in Class (sq ft)	Average Impervious Area in Class (sq ft)	Est. ERU's	ERU Percent of Total
Single-Family Residential	1831	NA	5309	1831	31.7%
Two-Family & Multi- Family Residential	519	3,910,069	7534	781.2	13.6%
Agricultural	260	3,955,678	15,214	791.0	13.7%
Business	88	6,123,302	69,583	1224.9	21.2%
Manufacturing	14	787,753	56,268	157.6	2.7%
Institutional	17	4,920,740	289,455	984.1	17.1%
Total	2729			5769.8	100.0%

6. EVALUATION OF PROPERTY IMPACTS

6.1 General

This section summarizes the proposed annual stormwater utility fee for each property classification using the established user fee rate. In addition, a comparison of cost distribution between the tax basis and the stormwater utility fee basis is provided. The impacts are shown based on a first year annual utility budget of \$250,000.

6.2 Single-family Parcels

All of the Village of Somers's 1831 developed single-family residences within the study area are determined to be equal to one (1) ERU. Therefore, all single-family residential units will be charged \$43.32/ year or \$10.83/quarter utility bill.

6.3 Two-family, Multi-family, and Non-residential Parcels

All two-family, multi-family, and non-residential parcels were analyzed to determine the number of ERU on each parcel (based on the amount of impervious area measured on the parcel). Therefore, based on the ERU user fee rate established, each account will be multiplied by the number of ERU's of impervious area on the individual parcel. Each of these accounts will be charged \$10.83/quarter per ERU. For example, a commercial parcel with an impervious area of 12,500 square feet will be charged a fee based on 2.5 ERU's at a rate of \$10.83/quarter per ERU for a total of \$27.08/quarter ($12,500 \text{ sq ft} \div 5,000 \text{ sq ft/ERU} \times \$10.83/\text{quarter/ERU} = \$27.08/\text{quarter}$).

The parcel with the most impervious area is the UW-Parkside property. It will be charged a fee based on 632.1 ERU's and that cost is \$27,382.57 per year or \$6,845.64 per quarter utility bill.

6.4 Utility Customer Database of Annual Fees

Appendix A provides an account listing, sorted by customer classification and parcel number, and indicates the projected annual fee per customer based on the first year annual budget of \$250,000/year and the cost of \$10.83/quarter/ERU (\$43.32/year/ERU).

7. STORMWATER UTILITY ORDINANCE

7.1 Introduction

The stormwater utility ordinance is included as Appendix B. The ordinance provides language on the creation of the stormwater utility and policies.

7.2 Credits

The ordinance includes a credit policy for two-family, multi-family, and non-residential property owners. Property owners who reduce their impact on the Village's stormwater management program will be able to apply for a credit.

In order to be eligible for a credit, the reduction in impact must exceed the minimum stormwater management requirements in force at the time the management device was constructed. For example, if newly developed commercial property were to construct a stormwater detention pond meeting the current minimum detention standards, it would not be eligible for a credit. If, however, the pond were oversized to provide a benefit beyond the current minimum requirements, the property would be eligible for a credit.

There are certain stormwater management activities that the Village must conduct that benefit the entire community, regardless of whether or not an individual property contributes runoff to the Village's stormwater system. Therefore, a maximum credit of 50 percent has been established.

APPENDIX A

APPENDIX B

DRAFT STORMWATER UTILITY ORDINANCE

13.66 AUTHORITY.

(A) **Creation.** There is hereby created and established a stormwater ordinance for the Village of Somers. The implementation and oversight of the stormwater ordinance shall be under the supervision of the Village Administrator.

(B) **Authority.** The Village, acting through the Village Board, may without limitation due to enumeration, acquire, construct, lease, own, operate, maintain, extend, expand, replace, clean, dredge, repair, conduct, manage and finance such facilities, operations and activities, as are deemed by the Village to be proper and reasonably necessary for a system of storm water and surface water management. These facilities may include, without limitation due to enumeration, surface and underground drainage facilities, sewers, watercourses, retaining walls, ponds, streets, roads, ditches and such other facilities as will support a storm water management system.

(C) **Definitions.** For purposes of this subchapter, the following definitions shall apply:

(1) Developed property means property that has been altered from its natural state by the addition of any improvement, such as a building, structure or impervious surface and where a certificate of occupancy has been issued, or upon completion of construction or final inspection if no such certificate is issued; or where construction of an improvement is at least fifty (50%) percent complete and construction is halted for a period exceeding three (3) months.

(2) Dwelling unit means any residential space identified for habitation by the building code. A dwelling unit includes, but is not limited to: single family residences, and two-family, three-family, or four-family apartments, condominiums, or townhouse living units.

(3) Equivalent runoff unit or ERU is defined as five thousand (5,000) square feet of impervious area. The impervious area includes, but is not limited to, all areas covered by structures, roof extensions, patios, porches, driveways and sidewalks.

(4) Impervious area or impervious surface means a surface that has been compacted or covered with a layer of material so that it is resistant to infiltration by rainwater. It includes, but is not limited to, paved streets, driveways, roofs, sidewalks, parking lots, brick pavers and other similar surfaces constructed of impervious materials such as concrete, asphalt, etc. Compacted gravel is considered impervious area.

(5) Residential property means any lot or parcel developed exclusively for residential purposes including, but not limited to, single-family homes, two-family homes, multi-family homes, manufactured homes, and condominiums.

(6) Single family property means a residential space identified as a habitation

with exactly one (1) dwelling unit.

(7) Undeveloped property means property that has not been altered from its natural state by the addition of any improvements such as a building, structure, or impervious surface.

13.67 RATES AND CHARGES/APPEALS.

(A) **Rates and charges.**

(1) The basis for computation of the charge for storm water services to all lots and parcels of land within the Village is established under this section. The amount of charge to be imposed, the establishment of formulas for the calculation of charges, the creation of customer classifications for the imposition of charges, and changes in such charges, formulas and customer classifications may be made by further resolution of the Village Board. All charges established pursuant to this section shall be fair and reasonable. A schedule of current charges shall be maintained on file in the office of the Village Clerk/Treasurer.

(2) Charges shall be imposed to recover all or a portion of the costs of the storm water management activities. Such charges, which shall be established pursuant to further resolution of the Village Board, may include the following components:

(a) Equivalent Runoff Unit (ERU) Charge. The ERU charge shall be assessed for each developed property in the Village of Somers based upon the amount of impervious area as reasonably determined by the Village Administrator. The Village Administrator shall be responsible for determining the impervious area based on the best available information, including, but not limited to, data supplied by the Municipal Assessor, aerial photography, satellite imagery, the property owner, tenant, or developer. The formula for the ERU charge shall reflect that of a typical single-family unit.

(i) The charge imposed for a single-family structure shall be the rate for one ERU.

(ii) Two-family and multi-family residential property will be charged multiples of the ERU based on the impervious area. The factor shall be rounded to the nearest 0.1.

(iii) Other units of property will be charged multiples of the ERU based on the impervious area. The factor shall be rounded to the nearest 0.1.

(iv) All unoccupied developed lots and parcels shall be subject to the Storm Water Management Utility charges.

(b) Special Charge (SC). A Special Charge may be imposed on property that is in a specific area benefitted by a particular storm water management facility pursuant to §66.0627, Wis. Stats. The special charge will be developed to reflect the benefits/services in a particular area that may not be appropriate to spread to property throughout the Village of Somers.

(3) The Village Board may establish rates and classifications by further resolution as will be likely to provide a reasonable and fair distribution of costs for storm water management. In the event the owner and non-owner users of a particular property are not the same; the liability for the charges attributable to that property shall be that of the owner.

(4) The charges established will be billed to the customer at the same time and in the same manner as the Village tax bill as an additional fee for storm water services. Such charges shall be payable in the same manner as a tax bill. Bills for storm water charges shall be mailed to the owner of the property to which the bill relates. Payment is due with the first tax installment.

(5) All storm water service charges shall be billed and collected, and shall be a lien upon the property served under the provisions of §66.0809, Wis. Stats., as amended and/or renumbered.

(B) **Credits.**

(1) A property owner may be eligible for a credit, in the form of a reduced ERU multiplier, for a property where all of the following conditions apply subject to the discretion, authority and approval of the Village Board.

(a) The Village's cost of providing service or making service available to the property has been lessened.

(b) The property conforms to all applicable codes and standards of the Village in effect at the time of parcel development.

(c) Single-family residential properties are not eligible for credits.

(2) The maximum aggregate credit for any individual property is fifty (50%) percent of its ERU charge, regardless of how many credits the property may otherwise be qualified to receive.

(3) The following credits may be available for a property that meets all

eligibility requirements:

- (a) Credits shall be considered for properties that discharge storm water directly into a water body not maintained in any way by the Village, or directly into a water body downstream of where it is maintained by the Village, or is otherwise contained entirely upon the property.
- (b) Credits shall be considered for owners who maintain private storm water management facilities such as retention or detention basins that exceed state and local discharge rate requirements applicable to the site.

(C) **Adjustments.**

- (1) An owner may be eligible to have the number of ERUs assigned to the owner's property adjusted under the following conditions:
 - (a) The owner of a property, except for single-family residential properties, who believes the number of ERUs allocated to such property to be incorrect may submit an adjustment request to the Village Administrator. The allocated ERUs may be adjusted if the owner can provide information showing that the impervious area measurement is incorrect.
 - (b) The owner of any property that can show the property to be in an undeveloped natural state with no built impervious area may request that the property status be changed to exempt.
 - (c) No adjustment shall be considered for any natural features, such as but not limited to, wetlands, lakes and floodplains, or water impoundments of any kind in existence prior to passage of this subchapter.

(D) **Appeals procedures.**

- (1) Adjustments for ERU charges.
 - (a) The Village elects not to be subject to the administrative review provisions contained within Chapter 68 of the Wisconsin Statutes, and establishes the following as a complete and final review procedure: Appeals shall be limited to the customer classification determination, a determination of ERU's, or ERU credits made for the calculation of total impervious area. There shall be no right of appeal as to the underlying findings and necessity of this subchapter or the single-family unit charge as applied to any single-family properties.

(b) The storm water management utility charge may be appealed as follows:

(i) A written appeal shall be filed with the Village Administrator prior to the storm water management utility charge due date; or

(ii) Within thirty (30) days of payment, a written challenge to the storm water management utility charge must be filed with the Village Administrator on behalf of the customer, specifying all bases for the challenge and the amount of the storm water management utility charge the customer asserts is inappropriate. Failure to file a challenge within thirty (30) days of payment waives all right to later challenge the charge.

(iii) The disputed charge shall be held in abeyance until the Village Board has made a determination pursuant to this subchapter.

(c) The Village Board will determine whether the storm water management utility charge is fair and reasonable, or whether a refund is due the customer. The Village Board may act with or without a hearing and will inform the customer in writing of its decision. The Village Board or their designee may, at its discretion, require access to the property to assist in its determination.

(d) The customer has thirty (30) days from the decision of the Village Board to file a written appeal to the Village Board.

(e) In the event of an appeal, the Village Board shall hold a hearing as provided in §68.11(2) and §68.11(3), Wis. Stats. The Village Board shall hold such hearing within thirty (30) days of the appeal request, and shall notify the appellant of the hearing date no less than ten days notice in advance of the hearing. Within twenty (20) days of the hearing and the filing of briefs, if any, the Village Board shall mail or deliver to the appellant its written final determination, setting forth, in detail, the reasons for its decision.

(f) If the Village Board determines that a refund is due the customer, the refund will be applied as a credit on the customer's next monthly storm water management billing, if the refund will not exceed the customer's next quarterly storm water management billing, or will be refunded at the discretion of the Village Administrator.

(g) Notwithstanding the above procedures, any user may file a

complaint to the public service commission claiming that rates, rules and practices herein are unreasonable or unjustly discriminatory, pursuant to §66.0821(5), Wis. Stats.

DRAFT
